

## practical no:- 8

1. Use the inbuilt dataset 'titanic'. The dataset contains 891 rows and contains information about the passengers who boarded the unfortunate Titanic ship. Use the Seaborn library to see if we can find any patterns in the data.
2. Write a code to check how the price of the ticket (column name: 'fare') for each passenger is distributed by plotting a histogram.

```
In [1]: import pandas as pd
import numpy as np
import matplotlib.pyplot as plt
import seaborn as sns
import warnings
warnings.filterwarnings('ignore')
```

```
In [2]: df = sns.load_dataset('titanic')
```

```
In [3]: df.head()
```

```
Out[3]:
```

|   | survived | pclass | sex    | age  | sibsp | parch | fare    | embarked | class | who   | adult_male | deck | embark_town | alive | alone |
|---|----------|--------|--------|------|-------|-------|---------|----------|-------|-------|------------|------|-------------|-------|-------|
| 0 | 0        | 3      | male   | 22.0 | 1     | 0     | 7.2500  | S        | Third | man   | True       | NaN  | Southampton | no    | False |
| 1 | 1        | 1      | female | 38.0 | 1     | 0     | 71.2833 | C        | First | woman | False      | C    | Cherbourg   | yes   | False |
| 2 | 1        | 3      | female | 26.0 | 0     | 0     | 7.9250  | S        | Third | woman | False      | NaN  | Southampton | yes   | True  |
| 3 | 1        | 1      | female | 35.0 | 1     | 0     | 53.1000 | S        | First | woman | False      | C    | Southampton | yes   | False |
| 4 | 0        | 3      | male   | 35.0 | 0     | 0     | 8.0500  | S        | Third | man   | True       | NaN  | Southampton | no    | True  |

```
In [4]: df.info()
```

```
<class 'pandas.core.frame.DataFrame'>
RangeIndex: 891 entries, 0 to 890
Data columns (total 15 columns):
#   Column          Non-Null Count  Dtype  
---  -
0   survived        891 non-null   int64  
1   pclass          891 non-null   int64

13  alive         891 non-null   object  
14  alone         891 non-null   bool    
dtypes: bool(2), category(2), float64(2), int64(4), object(5)
memory usage: 80.7+ KB
```

```
In [5]: df.shape
```

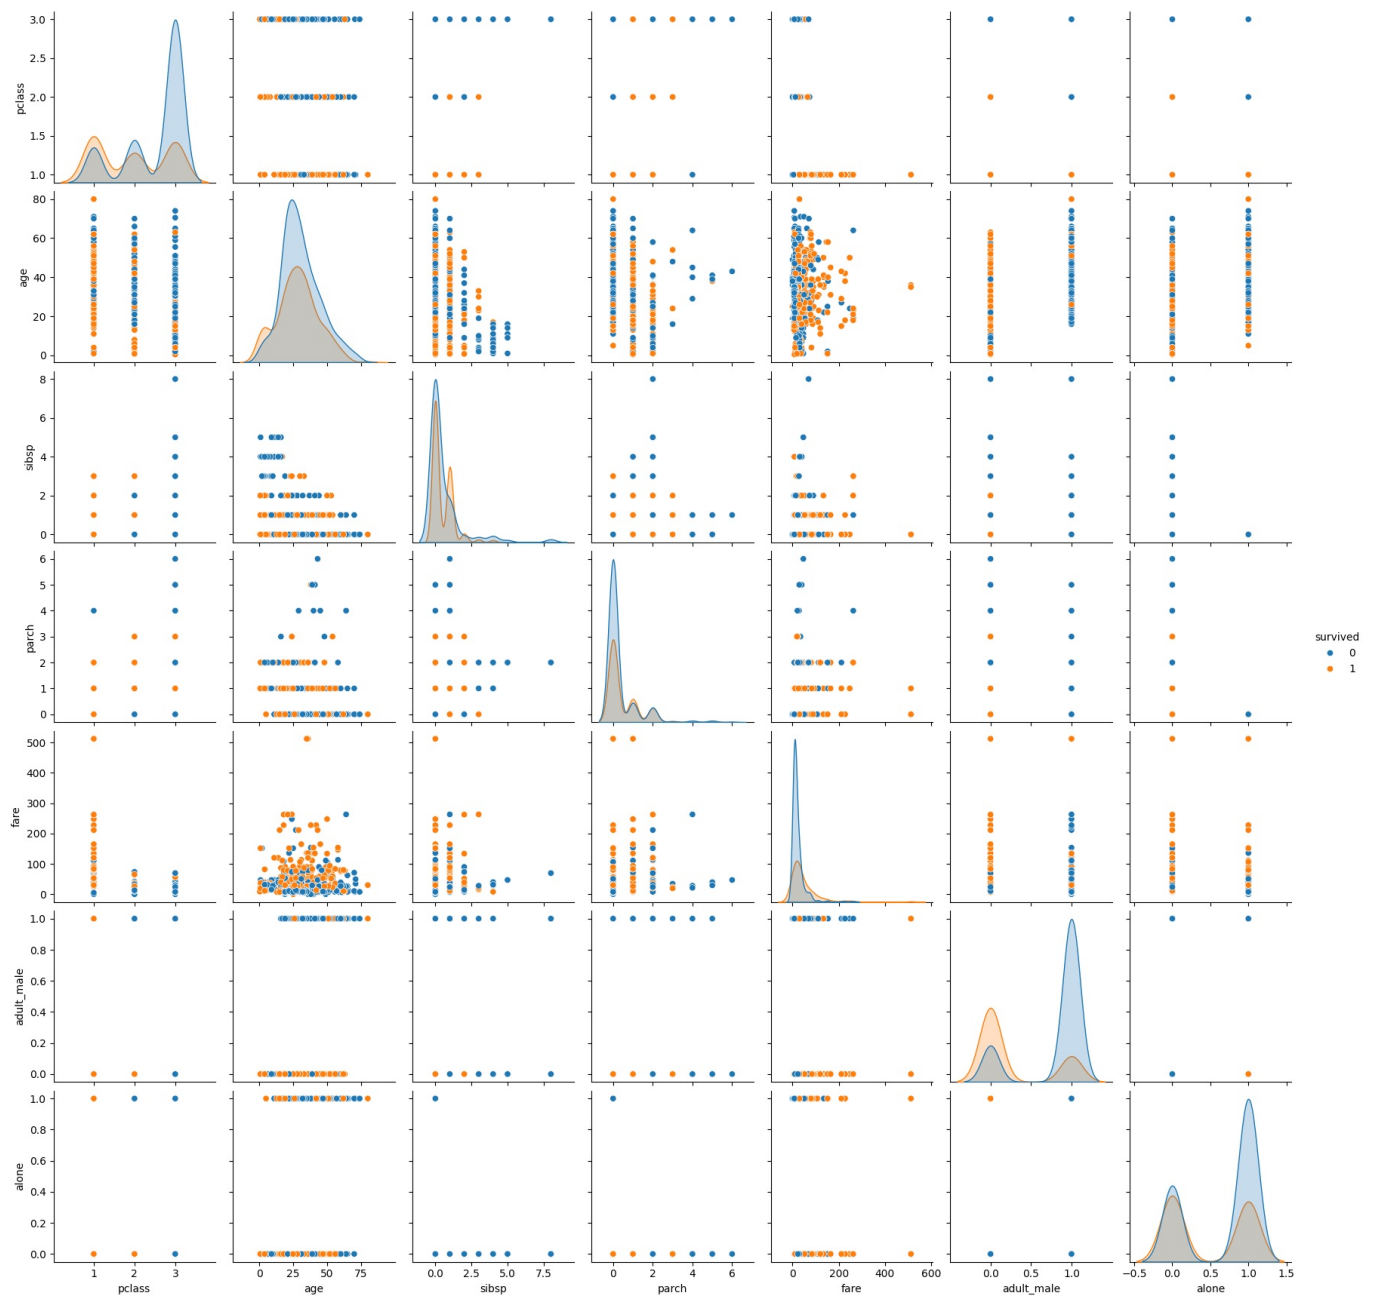

```
Out[5]: (891, 15)
```

```
In [6]: df.size
```

```
Out[6]: 13365
```

1) Use the inbuilt dataset 'titanic'. The dataset contains 891 rows and contains information about the passengers who boarded the unfortunate Titanic ship. Use the Seaborn library to see if we can find any patterns in the data.

```
In [7]: sns.pairplot(df , hue = 'survived')
plt.show()
```

People who paid high fare had slightly more chance of survival also people who were younger had slightly more chance of survival

2) Write a code to check how the price of the ticket (column name: 'fare') for each passenger is distributed by plotting a histogram.

```
In [8]: plt.xlabel('Ticket Fare')
plt.ylabel('Frequency')
sns.histplot(df['fare'], kde=True, bins=20)
plt.show()
```
